## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election without traverse of claim 16 in Paper No. 5 is acknowledged.

### ***Specification***

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 16 is rejected under 35 U.S.C. 102(e) as being anticipated by Tseng [U.S. Pat. 6,376,885].

Tseng (figs. 1A-1E, cols. 2-4) discloses a semiconductor device comprising:

a gate electrode (106 and 124) provided on a semiconductor substrate (100) with the intervention of a gate insulating film (104) (see col. 2, lines 36-43, col. 3, lines 38-48);

a sidewall insulating film (112) provided on a side wall of the gate electrode (see col. 2, lines 49-50);

source/drain regions (114) provided in the semiconductor substrate (see col. 2, lines 50-52); and

contact plugs (122) provided on the source/drain regions (see col. 3, lines 51-55); wherein the gate electrode (106 and 124) is electrically isolated from the contact plugs (122) by the sidewall insulating film (112) alone (see fig. 1D);

wherein the gate electrode (124) is partly or entirely composed of the same material as the contact plugs (122) (see col. 3, lines 38-58);

wherein the gate electrode (106 and 124) and the contact plugs (122) have the same height (see fig. 1D).

### ***Conclusion***
